KADIYALA APARNA

Synopsis: Joined Hexaware Technologies in January 2024 and transitioned to the Freeport-McMoRan project in March 2024.Developed intermediate proficiency in Snowflake and SQL, focusing on data development tasks, including writing complex queries for data manipulation and transformation. Built foundational expertise in Azure cloud services and Snowflake for implementing data warehousing and cloud-based solutions.

QUALIFICATION

Degree	Institute	Year
Bachelor of Engineering (Computers)	Annamacharya Institute of Technology	2023
Intermediate	NRI Academy	2019
SSC	Bhavitha High School	2017

CERTIFICATION

Certification	Institute	Year
DP-203 Azure Data Engineer Associate	Microsoft	Jan 2024
Python PCEP Certification	Python Institute	Feb 2024
Az-900 Microsoft Azure Fundamentals	Microsoft	May 2024
Snow Pro Core Certification	Snowflake Community	June 2024

Working with Hexaware Technologies Ltd. From January 2024 – Till date

PROJECT EXPERIENCE

Freeport-McMoRan: In my role as a Data Engineer, I had the opportunity to work with Freeport-McMoRan, a leading international mining company. During this engagement, I was responsible for developing and optimizing data pipelines automating ETL processes and integrating data from various sources into cloud-based platforms like Snowflake for real-time analytics.

Key Contributions:

- Designed and implemented ETL processes to automate data extraction from multiple sources, including IoT devices and legacy systems.
- Enhanced data quality by developing robust data validation and cleansing routines.
- Utilized SQL and Python to perform complex data transformations and analysis, providing actionable insights to the client's decision-makers.
- Created interactive dashboards in Power BI to visualize key performance indicators (KPIs) and operational metrics, improving transparency and operational efficiency.

Type: Development, Maintenance
Domain: Manufacturing and Consumer
Tools & Environment: Snowflake, Azure Data Factory, SSMS, Redwood RMJ, Azure DevOps, GIT

KADIYALA APARNA

Duration: March 2024 till date
Role & Responsibilities: Team Member

- Assist in designing, building, and maintaining scalable data pipelines for extracting, transforming, and loading (ETL) data from various sources into data warehouses or data lakes.
- Write efficient SQL queries and scripts for data extraction and transformation.
- Work with different data sources and formats (e.g., databases, APIs, flat files) to integrate data into unified systems.
- Support the integration of new data sources into the existing data infrastructure.

Event-Driven Data Ingestion Pipeline – Freeport McMoRan (POC) Apr 2024 - SEP 2024

● Designed and implemented an event-driven data ingestion pipeline using Azure Functions, Azure Blob Storage, and Snowflake for seamless data synchronization.
● Developed a solution to handle both incremental (delta) and full data loads, configurable through a load configuration table.
● Utilized SQL Triggers for real-time updates and HTTP Triggers for on-demand full loads, ensuring flexibility in data processing.
● Automated deployment processes using Azure DevOps pipelines with YAML scripts for efficient and reliable updates.
● Incorporated change tracking and JSON-based configurations to simplify and scale data management.
● Delivered a robust and scalable system to keep Snowflake data accurate and up to date for analytics.

PERSONAL DETAILS

Date of Birth: 26-05-2001

Email ID: 2000112421@hexaware.com

Phone: 7569917762

Marital status: Single

Nationality: Indian

Sex: Female
