HEXAWARE

Mallapelli _Meghana

Synopsis: Over 6+ years of experience in a variety of industries, which includes hands on experience of around 4 years in various Azure data services**.** Involved in implementing Pyspark DataFrame, Transformations and actions to implement business Analysis. Experience in processing data in Spark using Scala to load the data from Data Lake Store to Integrate Layer.

EXPERIENCE SUMMARY

Has over 4 years of experience in Azure data services

- Experience in Python and spark to scrape, clean and analyze large Datasets.
- Analyzed the SQL scripts and designed the solution to implement using Pyspark.
- Experienced in handling large datasets using Partitions, Spark in Memory capabilities, Broadcasts in Spark, Effective & efficient Joins, Transformations and other during ingestion process itself.
- Strong fundamental knowledge in SQL queries.
- Worked with Azure Storage Systems like Azure Data Lake Store (ADLS) and Azure Blob Storage. Constructed the Azure data factory (ADF) pipelines with utilization of transformation activities such as Hive, Spark Etc.
- Flexible enough to adapt new environments.
- Analyze, design and build Modern data solutions using Azure service to support visualization of data Involved in building the dashboards.

Areas of Experience

Industries
HealthCare

Languages
→PYTHON
→PYSPARK
→SCALA

Databases
→SQL
→ORACLE
→AZURE SQL

Operating Systems
Windows 98/NT/XP Windows 2000 Advanced Server

Technologies

→Azure Functions
→Azure Data Factory
→Dataflows

Tools

→MS Office suite
→ Git

QUALIFICATION

Degree	Institute	Year
Bachelor of Technology	G. Narayanamma Institute of Technology and Science	2018

Mallapelli _Meghana

Working with Hexaware Technologies Ltd. From January 2025 – Till date

PROJECT EXPERIENCE

Project Name	**:** Hedis -AmeriHealth Caritas
Role	**:** System Analyst
Environment	**:** ADF, Azure Databricks
Duration	**:** JAN 2025 to FEB 2025
Tools Used	**:** Azure Data Bricks, Scala, Pyspark, JSON

Description: HEDIS Project is focused to led a comprehensive initiative to enhance the integration and reporting of Healthcare effectiveness Data and information set measures within AmeriHealth caritas. Focused on optimizing data exchange processes and improving the accuracy of clinical data to effectively close gaps in care for members.

Roles and Responsibilities:

- Developed and optimized scala scripts in Databricks Notebooks to process and transform the data.
- Attended the client calls to understand the requirement.
- Implemented Astrata FHIR resource mapping by using FHIR mapping and crosswalk sheets and converting it into JSON format.
- Worked on scala in data bricks environment to make the transformations in existing and new data bricks notebooks.
- Reporting to the onsite coordinator about the status of the test activities daily.

PREVIOUS WORK EXPERIENCE

- Worked as a Senior Software Engineer in Nowon technologies private limited, Bangalore from Jan 2021 – Dec 2024
- Worked as CS Associate at Amazon development center India private limited, Hyderabad from Jun 2020 – Dec 2020
- Worked as an Associate at Spontact global, Bangalore from Aug 2018 – May 2020

Project Name	**:** Nexus Insights
Role	**:** Azure Data Engineer
Environment	**:** Azure Data factory
Tools Used	**:** Azure data bricks, Azure Sql, ADLS 2

Description: Global Tech Solutions is focused on enhancing their supply chain analytics by leveraging data from multiple sources. The project aims to build a robust data pipeline to analyze supply chain efficiency, monitor inventory levels, and predict demand trends. By integrating data from various operational systems, the goal is to provide actionable insights that drive efficiency and reduce costs.

Mallapelli _Meghana

Role and responsibilities:

- Copied data from On-premises SQL server to Azure Data Lake Storage Gen2
- Building End-to-End pipelines and used data flows for implementing Data transformations
- Attended the client calls to understand the requirement.
- Used data flows to perform data quality checks.
- Batch Data sources are ingested by creating pipeline using Azure data factory via Integration Runtime.
- Deployed distributed data processing system using Azure ecosystem such as Azure Data Bricks and used the Azure Key Vault service to store secrets and keys used for encryption.

Project Name	**:** Horizon Data Hub
Role	**:** Team Member
Environment	**:** Azure data factory, Azure data bricks, Azure SQL db, ADLS2

Description: Horizon Data Hub is designed to centralize and optimize data storage for Travel Tech Innovations' global network of travel partners, including booking systems, customer relationship management, and operational data. The project aims to aggregate and process diverse datasets from multiple sources, enabling comprehensive analytics for improving customer experiences and operational efficiency. The data will be structured in a way that supports real-time reporting and business intelligence.

Role and Responsibilities:

- Developed and optimized data transformation workflows using Azure Data Factory for efficient data processing.
- Designed and implemented data ingestion pipelines in Azure Data Factory to collect data from various sources, including APIs and flat files (CSV, JSON)
- Implemented data validation processes to ensure accuracy and integrity of incoming datasets.
- Conducted performance tuning and optimization of data pipelines and storage solutions to improve overall efficiency.

Personal Details:

Name	**: Mallapelli Meghana**
Do you have a Passport (Yes/No)	**: Yes**
Visa Status	**: NA**
