SHARATH KUMAR C

Synopsis: Over 6 years of Experience into Data Engineering, primarily in the areas of Data Analysis, Data Quality Checks, CICD pipeline management and ETL tool based processes . Have exposure to domains like Supply Chain, Healthcare, IOT sensor data, gateway api sensor data.

EXPERIENCE SUMMARY

Has over 6 years of experience in Data Engineering

- Worked with Pyspark Scripts for data file quality checks and deployed into Multilevel aws based cloud environments.
- Developed Python-based APIs for Lambda functions to handle s3 events. Built and maintained efficient File Management APIs using Pyspark & Great Expectations.
- Involved in planning, execution and monitoring and controlling the pipelines, technologies and tools used throughout the projects.
- Experienced in building docker powered data streaming pipelines using docker-elasticsearch.
- Developed PySpark scripts for data analysis of large datasets, creating insightful reports, and developing data visualization dashboards.
- Experienced in handling large datasets from a variety of industries, including automotive, financial, and educational. Collaborated with other engineers and stakeholders to design and implement data solutions.
- Developed Mail Bots.
- Developed robust Pyspark Scripts for report generation, data mining, and customer rights allowances.
- Designed and created a dockerized environment for various data processing and streaming components, such as Docker-Kafka, Docker-Elasticsearch, and Spark models. Captured, processed, and streamed data from IoT gateways through Kafka and Elasticsearch, enabling real-time data analytics for projects like Pulse Secure.
- Implemented automated workflows using Airflow ensuring efficient execution of data processing tasks for projects like S-SquareSpenta.

Areas of Experience

Industries
Healthcare
automotive and
consumer finance
Telecom infrastructure
management and
process automation
transportation and
motor vehicle
manufacturing
Industry.

Languages
Python
Pyspark

RDBMS
MS SQL
MYSQL
Postgres

NO-SQL
Elasticsearch
s3

Operating Systems
Windows
Ubuntu
Serverless - AWS Lambda

Cloud Technologies
AWS Lambda
AWS SNS
AWS SQS
AWS EMR
S3

Others
Kafka + Zookeeper
Docker

SHARATH KUMAR C

QUALIFICATION

Degree	Institute	Year
Bachelor of Engineering (Computers)	Visvesvaraya Technological University	2018
PUC/ 12th	Vijaya Mains Pre-University, Bangalore	2014
School	S.T Lourdes High School (Cambridge Trust)	2012

CERTIFICATION

Certification	Institute	Year
AI Fundamentals Data Bricks	Data Bricks	2023
IBM AI Ladder	IBM	2023
Big Data Crash Course	IIHT	2018
SQL	JSPIDERS	2018

SHARATH KUMAR C

Working with Hexaware Technologies Ltd. From April 30th 2025 – Till date

PROJECT EXPERIENCE

1. **Business Products and Services (BPS):** Client is one of the biggest companies in USA. This company has huge client base worldwide. Client supplies software and hardware to all the clients. BPS is responsible for maintaining the inventory of all the products, managing customer orders, manufacturing and Shop floor applications. Arvind was responsible for CIS, Manufacturing and Engineering modules. He was SME for CIS as well.

   Type: Development, Maintenance
   Domain: Supply Chain
   Tools & Environment: Unisys A Series Mainframe, COBOL, ALGOL, DMSII, Oracle 9i, VB-6, ASP, .Net 4.0
   Duration: May 2012 till date
   Role & Responsibilities: Delivery Lead / SME
   - Primarily responsible for timely delivery and quality of the deliverables.
   - Manage the onsite as well as off-shore team and sort out technical issues
   - Effectively plan and execute the daily operations critical to business.

PREVIOUS WORK EXPERIENCE

- ➢ Worked as Lead Software Engineer in Persistent Systems.
- ➢ Worked as a Data Engineer B1 at Suyati Technologies.
- ➢ Worked as Software Engineer Trainee at Tibil Solutions.

1. **United HealthCare - Optum:** Optum, Inc. is an American healthcare company that provides technology services, pharmacy care services and various direct healthcare services.

   Domain: Healthcare
   Type: Development, Maintenance
   Tools & Environment: Pyspark, AWS EMR, AWS SNS, Gitlab, Service Requests, AWS lambda, S3, SQS, Sparkflow, Airflow.
   Duration: Nov 2023 – Feb 2025
   Role & Responsibilities: Senior Data Engineer
   - Developed pyspark + great expectation scripts for data quality checks.
   - Python api request scripts for s3 to sqs event record handling.
   - Used EMR service for pyspark scripts.
   - Integrated and Deployed Python Request APIs into AWS Lambda. Integrated Lambda with SNS, SQS and S3.
   - Generation of daily, monthly and annual file validation reports based on great expectations results.
   - Performed Unit Test Coverage on the transformation scripts with a usual target of above 90% test coverage.
   - Technologies Used- Pyspark, S3, EMR, SNS, SQS, Lambda, Gitlab, Service Now.

2. **Byrider:** Byrider is the nation's leading used car and finance enterprise with a return on investment opportunity ranking among the highest in the franchise industry.

   Domain: automotive and consumer finance
   Type: Data Pipeline Development, Maintenance, Kodda ETL tool handling
   Tools & Environment: Kodda ETL, Python, AWS Lambda.

© Hexaware Technologies Limited. All rights

Duration: Nov 2021 **–** Feb 2023
Role & Responsibilities: Data Engineer

- Conducted data mining, leveraged Pyspark to generate insightful reports.
- Managed code through Bitbucket, executed scripts within AWS Lambda, and implemented data transformations and migrations using ms-sql queries and Kodda ETL processes.
- Data Mapping, Data Virtual Pipeline Creation within Kodda ETL, Scheduling of the pipelines as workflow jobs.

.

3. **Gillig:** GILLIG LLC is a prominent American manufacturer specializing in heavy-duty transit buses. Established in 1890 by Jacob Gillig in San Francisco, the company has evolved over more than a century to become a key player in the North American public transportation industry.
   Domain: transportation and motor vehicle manufacturing
   Type: Development, Maintenance
   Tools & Environment: Pyspark, Postgresql.
   Duration: Feb 2023 – Oct 2023
   Role & Responsibilities: Junior Data Engineer.
   - Developed data transformation workflows to enhance data processing efficiency, contributing to seamless data transformations for the foremost heavy-duty transit bus manufacturer, GILLIG, in the United States.

4. **ACE - AMERICAN COLLEGE OF EDUCATION:** A program with 10 different funds. In these funds, Client's employees can invest from their salary. Client contributed half of employee's 7% contribution that is 3.5% as their part. Employees could switch their investments from one plan to another. Employees above 50 contributed more than others through catch-up contribution.

   Domain: Educational
   Type: Development
   Tools & Environment: Python NLP modules, Elasticsearch, Docker, AWS EC2, Elastic search.
   Duration: Feb 2023 – Oct 2023
   Role & Responsibilities: Team Leader
   - Constructed a Docker desktop environment within an AWS EC2 instance running on Ubuntu.
   - Developed a Python-based Natural Language Processing Bot driven by a Rule Engine, and oversaw Elasticsearch for robust data management.
   - Successfully deployed NLP models using Docker environments hosted on AWS ec2 instance.

5. **S-Squarespenta:**
   Domain: Telecom infrastructure management and process automation
   Type: Development
   Tools & Environment:
   Duration: Aug 2019 - Jan 2021
   Role & Responsibilities: Team Member
   - I leveraged PySpark for data transformation.
   - Integrated PySpark jobs with Airflow, ensuring data is prepared for analysis efficiently and reliably. I collaborate with cross-functional teams to maintain data pipelines, uphold data quality.
   - Also worked in a collaborative environment for Apache Superset Dashboard Visualization.
   - Technologies Used - PySpark, Ubuntu, Apache Superset, Druid.
